What is LIBTAYO?

LIBTAYO (Lib-TIE-oh) is a prescription medicine used to treat people with a type of skin cancer called cutaneous squamous cell carcinoma (CSCC) that has spread or cannot be cured by surgery or radiation.

It is not known if LIBTAYO is safe and effective in children.

Important Safety Information

What is the most important information I should know about LIBTAYO?

LIBTAYO is a medicine that may treat a type of skin cancer by working with your immune system. LIBTAYO can cause your immune system to attack normal organs and tissues in any area of your body and can affect the way they work. These problems can sometimes become severe or life-threatening and can lead to death. You can have more than one problem at the same time. These problems may happen anytime during treatment or even after your treatment has ended.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
Understanding your treatment with LIBTAYO

Your treatment team has given you this brochure because you have been prescribed or are considering treatment with LIBTAYO. The information in this brochure is not meant to take the place of talking with your doctor, nurse, or other healthcare providers. Always talk with your doctor if you have any questions about your treatment or any side effects.

As you begin your treatment, there can be a lot of information and many details to keep track of. This guide was designed to help you understand your treatment with LIBTAYO, which treats people with a type of skin cancer called cutaneous (kyoo-TAY-nee-us) squamous (SKWAY-mus) cell carcinoma (sel KAR-sih-NOH-muh) (CSCC) that has spread or cannot be cured by surgery or radiation. It provides you with questions you can ask your doctor, along with plenty of space to take notes during your conversation.

This guide will provide you with important information, including:

- Information to help you understand CSCC and how it may become advanced
- The ways advanced CSCC can be treated
- Information about LIBTAYO, including what you can expect from treatment and the resources that are available to you while you are taking LIBTAYO

Important Safety Information (continued)

Call or see your healthcare provider right away if you develop any symptoms of the following problems or these symptoms get worse:

- **Lung problems (pneumonitis).** Signs and symptoms of pneumonitis may include new or worsening cough, shortness of breath, and chest pain.

- **Intestinal problems (colitis) that can lead to tears or holes in your intestine.** Signs and symptoms of colitis may include diarrhea (loose stools) or more frequent bowel movements than usual; stools that are black, tarry, sticky or that have blood or mucus; and severe stomach-area (abdomen) pain or tenderness.

- **Liver problems (hepatitis).** Signs and symptoms of hepatitis may include yellowing of your skin or the whites of your eyes, severe nausea or vomiting, pain on the right side of your stomach area (abdomen), drowsiness, dark urine (tea colored), bleeding or bruising more easily than normal, and feeling less hungry than usual.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
CSCC

Learn about a type of skin cancer called cutaneous squamous cell carcinoma (CSCC), and what it means when it becomes advanced.
**What is CSCC?**

Cutaneous squamous cell carcinoma (CSCC) is the second most common type of skin cancer in the United States. CSCC starts in squamous cells, which are a type of flat, thin cell in the top layer of the skin (the top layer of the skin is known as the epidermis).

CSCC occurs when squamous cells develop changes called mutations in their DNA. A cell's DNA contains the instructions that tell a cell what to do. The mutations tell the squamous cells to grow out of control and to continue living and dividing when normal cells would die. Most of the DNA mutations in these skin cells are caused by ultraviolet exposure from sunlight and in tanning lamps and tanning beds.

CSCC can appear as scaly red patches, open sores, rough, thickened, or wart-like skin, or raised growths with a central depression.

Most CSCC cases, about 95%, may be easily treated and curable when detected early. CSCC cases that become advanced can be more challenging to treat successfully.

---

Please see additional Important Safety Information throughout and [click here for full Prescribing Information](#), including [Medication Guide](#).
What is advanced CSCC?

CSCC that has spread extensively or aggressively, or in some cases has not responded to multiple treatments and has returned repeatedly, is considered advanced because it has spread or cannot be cured by surgery or radiation.

- There are 2 forms: locally advanced CSCC and metastatic CSCC
- Locally advanced CSCC occurs when tumors become large or have grown deep into underlying tissues, muscles, or nerves, destroying nearby healthy tissue. These lesions can become swollen, painful, and disfiguring
- Metastatic CSCC occurs when tumors spread beyond their original location to other parts or organs of the body

CSCC can have different appearances and can vary from person to person. CSCC grows as a lesion on the surface of the skin. It may also spread to other parts of the body and can even spread inside the body.

Important Safety Information (continued)

Call or see your healthcare provider right away if you develop any symptoms of the following problems or these symptoms get worse (continued):

- **Hormone gland problems** (especially the adrenal glands, pituitary, thyroid and pancreas). Signs and symptoms that your hormone glands are not working properly may include headaches that will not go away or unusual headaches, rapid heartbeat, increased sweating, extreme tiredness, weight gain or weight loss, dizziness or fainting, feeling more hungry or thirsty than usual, hair loss, feeling cold, constipation, deeper voice, very low blood pressure, urinating more often than usual, nausea or vomiting, stomach-area (abdomen) pain, and changes in mood or behavior, such as decreased sex drive, irritability, or forgetfulness.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
Questions for your doctor

Below are questions you can ask your doctor to understand your advanced CSCC better. Use this page to take notes during your conversation.

How is advanced CSCC different from other types of skin cancers?

How do I know if I have locally advanced CSCC or metastatic CSCC?

How do you determine if someone with advanced CSCC cannot be cured by surgery or radiation?

Important Safety Information (continued)

Call or see your healthcare provider right away if you develop any symptoms of the following problems or these symptoms get worse (continued):

- **Kidney problems**, including nephritis and kidney failure. Signs of these problems may include decrease in your amount of urine, blood in your urine, swelling in your ankles, and loss of appetite.
Treating advanced CSCC

This next section provides an overview of the types of doctors who treat advanced CSCC and some of the treatment options that may be appropriate for you.
Who treats advanced CSCC?

The following specialized doctors may be involved in your care and can help determine the right treatment options for you.

- **Dermatologists**: doctors who evaluate and treat disorders of the skin
- **Mohs surgeons**: doctors who use a specific surgical technique to treat skin cancer; they remove thin layers of cancerous skin until no cancer cells remain
- **Oncologists**: doctors who diagnose and treat cancers
- **Surgical oncologists**: doctors with specialized training to manage and remove tumors and other cancerous tissue through surgery
- **Radiation oncologists**: doctors who specialize in radiation therapy, a treatment that uses high doses of radiation to kill cancer cells and shrink tumors

It is important that your doctor considers working with a team of multidisciplinary healthcare providers when helping you look at all of your treatment options, and that they work together to develop a treatment plan specific to you.

Important Safety Information (continued)

Call or see your healthcare provider right away if you develop any symptoms of the following problems or these symptoms get worse (continued):

- **Skin problems.** Signs of these problems may include rash, itching, skin blistering, and painful sores or ulcers in the mouth, nose, throat, or genital area.

Please see additional Important Safety Information throughout and [click here for full Prescribing Information](#), including Medication Guide.
How is advanced CSCC treated?

While most CSCC cases can be cured with surgery or radiation when found and treated early, in advanced stages these can become more difficult to treat successfully.

Surgery
During surgery, the intent is to remove the cancerous tumor and affected surrounding tissue. Some people with advanced CSCC may have multiple surgeries as part of their treatment to remove tumors on the head, neck, and other parts of the body. Depending on the extent and location of the surgery, some may need reconstructive surgery to repair areas of the skin or other structures of the body such as the nose or ear affected by the tumor. Surgery for CSCC is typically performed by a surgical oncologist, Mohs surgeon, or another trained surgical specialist.

Radiation
Advanced CSCC may also be treated with radiation therapy, which is a type of cancer treatment that uses beams of intense energy, most often X-rays, to kill cancer cells and shrink tumors. Radiation therapy is given by a radiation oncologist.

Immunotherapy may also be used to treat metastatic CSCC or locally advanced CSCC when it cannot be cured by surgery or radiation.

Immunotherapy
Immunotherapy is a form of systemic drug therapy (a type of drug that moves through the body) that may help your immune system fight cancer. Your body might not attack cancer because the cancer cells have developed ways to avoid the immune system. Immunotherapy helps the immune system recognize, attack, and kill the cancer cells. Immunotherapy is given by an oncologist. It is not chemotherapy, which is another type of systemic drug therapy.

Immunotherapy can cause your immune system to attack normal organs and tissues in your body, which may cause serious side effects.

Some advanced CSCC tumors may not be cured by surgery or radiation.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
Questions for your doctor

Below are questions you can ask your doctor to help you make an informed decision about treatment. Use this page to take notes during your conversation.

Who are the members of my healthcare team and what are their roles?

How did you determine that I could not be cured by surgery or radiation?

How did you determine that immunotherapy is right for me?

Important Safety Information (continued)

Call or see your healthcare provider right away if you develop any symptoms of the following problems or these symptoms get worse (continued):

- **Problems in other organs.** Signs of these problems may include headache, tiredness or weakness, sleepiness, changes in heartbeat (such as beating fast, seeming to skip a beat, or a pounding sensation), confusion, fever, muscle weakness, balance problems, nausea, vomiting, stiff neck, memory problems, seizures (encephalitis), swollen lymph nodes, rash or tender lumps on skin, cough, shortness of breath, vision changes, or eye pain (sarcoidosis), seeing or hearing things that are not there (hallucinations), severe or persistent muscle pain, severe muscle weakness, low red blood cells (anemia), bruises on the skin or bleeding, and changes in eyesight.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
Starting treatment with LIBTAYO

You and your doctor have decided that treatment with LIBTAYO is the next step. This section will help you understand:

• What LIBTAYO is
• How it can help your immune system fight advanced CSCC
• How patients with metastatic CSCC or locally advanced CSCC, who could not be cured by surgery or radiation were treated with LIBTAYO in clinical trials
• How you will receive LIBTAYO
• What you can expect from treatment, including the possible side effects

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
What is LIBTAYO?

LIBTAYO is the first medicine approved by the Food and Drug Administration (FDA) to treat CSCC that has spread or cannot be cured by surgery or radiation. LIBTAYO is a type of immunotherapy called a programmed death receptor-1 (PD-1) inhibitor. LIBTAYO is not chemotherapy or radiation therapy.

LIBTAYO may be right for people with a type of skin cancer called cutaneous squamous cell carcinoma (CSCC) that:

- Has spread to other parts of the body (metastasized)
- Cannot be cured by surgery or radiation

Important Safety Information (continued)

Call or see your healthcare provider right away if you develop any symptoms of the following problems or these symptoms get worse (continued):

- Rejection of a transplanted organ. Your doctor should tell you what signs and symptoms you should report and monitor you, depending on the type of organ transplant that you have had.
LIBTAYO helped shrink tumors in some clinical trial patients

In 1 clinical trial of 137 patients with CSCC that had spread or could not be cured by surgery or radiation treated with LIBTAYO*:

63 out of 137 patients (46%) saw an improvement in their advanced CSCC with LIBTAYO

- Of these patients, 43 out of 137 patients (31%) saw tumors shrink (partial response)
- 20 out of 137 patients (15%) saw tumors disappear completely (complete response)

- In 50 out of 63 patients (79%) who responded to LIBTAYO, the response lasted 6 months or longer
- In 34 out of 63 patients (54%) who responded to LIBTAYO, the response lasted 12 months or longer
- In the same clinical trial, in a separate group of 56 patients with CSCC that had spread who took LIBTAYO at the recommended dose,† 23 out of 56 patients (41%) saw an improvement in their advanced CSCC
  - 20 out of 56 patients (36%) saw tumors shrink (partial response)
  - 3 out of 56 patients (5%) saw tumors disappear completely (complete response)
  - In 15 out of 23 patients (65%) who responded to LIBTAYO, the response lasted 6 months or longer
- In a different clinical trial of 26 patients with CSCC that had spread or could not be cured by surgery or radiation,* 13 out of 26 patients (50%) saw tumors shrink (all partial responses)
  - In 11 out of 13 patients (85%) who responded to LIBTAYO, the response lasted 6 months or longer

In these trials, responses lasted between 1 month and more than 2 years (24.2+ months); plus sign (+) denotes ongoing at last assessment.

*Patients were dosed by body weight.
†LIBTAYO 350 mg over a 30-minute infusion every 3 weeks.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
LIBTAYO may help your immune system fight CSCC that has spread or cannot be cured by surgery or radiation

Your immune system defends your body against disease.

Certain white blood cells (T cells) are an important part of your immune system. Their job is to find and fight infections and kill cancer cells. T cells have a protein on the cell surface called PD-1 or programmed death receptor-1, which is involved in normal T-cell function.

Some cancer cells are able to trick the immune system to prevent the attack from T cells. When proteins on cancer cells bind to the PD-1 receptor on T cells, this binding makes the T cell inactive and stops it from killing the cancer cell.

Important Safety Information (continued)

Call or see your healthcare provider right away if you develop any symptoms of the following problems or these symptoms get worse (continued):

- Infusion (IV) reactions that can sometimes be severe and life-threatening. Signs of these problems may include chills or shaking, itching or rash, flushing, shortness of breath or wheezing, dizziness, fever, feeling of passing out, back or neck pain, and facial swelling.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
LIBTAYO may help your immune system fight CSCC that has spread or cannot be cured by surgery or radiation (continued)

**LIBTAYO is a treatment that works by blocking PD-1**, to inhibit binding with the cancer cell protein. The T cell then remains active, so it can attack and kill the cancer cell.

LIBTAYO can cause your immune system to attack normal organs and tissues in any area of your body and can affect the way they work. These problems can sometimes become severe or life-threatening and can lead to death. These problems may happen anytime during treatment or even after your treatment has ended.

Getting medical treatment right away may help keep these problems from becoming more serious.

Your healthcare provider will check you for these problems during your treatment with LIBTAYO. Your healthcare provider may treat you with corticosteroid or hormone replacement medicines. Your healthcare provider may delay or completely stop treatment if you have severe side effects.

**Important Safety Information** (continued)

Please see additional Important Safety Information throughout and [click here for full Prescribing Information](#), including [Medication Guide](#).
LIBTAYO achieved results you can see

Below is an example of a patient’s results from clinical trials with LIBTAYO who achieved a partial response to treatment (43 out of 137 patients). Individual patient responses may vary.

**Patient example 1**

Pictured below is a neck tumor from an 85-year-old male patient. He had CSCC that had spread, or metastasized, to other parts of his body.

**Before starting treatment**

**After 8 weeks**

This patient’s response was still ongoing at time of data cutoff.

**Important Safety Information** (continued)

Before you receive LIBTAYO, tell your healthcare provider about all your medical conditions, including if you:

- have immune system problems such as Crohn’s disease, ulcerative colitis, or lupus;
- have had an organ transplant;
- have lung or breathing problems;
- have liver or kidney problems;

Please see additional Important Safety Information throughout and [click here for full Prescribing Information](#), including Medication Guide.
LIBTAYO achieved results you can see (continued)

Below is an example of a patient’s results from clinical trials with LIBTAYO who achieved a partial response to treatment (43 out of 137 patients). Individual patient responses may vary.

Patient example 2
Pictured below is an ear tumor from a 57-year-old male patient. He had CSCC that could not be cured by surgery or radiation.

Before starting treatment

After 24 weeks

After 56 weeks

This patient’s response was still ongoing at time of data cutoff.

Important Safety Information (continued)

Before you receive LIBTAYO, tell your healthcare provider about all your medical conditions, including if you (continued):

• have diabetes;
• are pregnant or plan to become pregnant; LIBTAYO can harm your unborn baby.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
How will I receive LIBTAYO?

LIBTAYO is a medicine prescribed by a doctor. It is given in a hospital or clinic as a 30-minute intravenous (IV) infusion. That means it enters the body through a vein.

What is the schedule for infusions of LIBTAYO?

1. 350-mg IV infusion
2. For 30 minutes
3. Every 3 weeks

- LIBTAYO is an IV infusion given over 30 minutes
- Treatment with LIBTAYO happens once every 3 weeks
- Infusion reactions may happen while you are receiving the drug. Infusion (IV) reactions can sometimes be severe and life-threatening. Signs of these problems may include chills or shaking, itching or rash, flushing, shortness of breath or wheezing, dizziness, fever, feeling of passing out, back or neck pain, and facial swelling. Tell your doctor right away if you start to experience any of these symptoms
- Your healthcare provider will decide how many treatments you will need
- Your healthcare provider will do blood tests to check you for side effects

It is important to continue treatment as prescribed by your doctor. If you miss any appointments, call your healthcare provider as soon as possible to discuss your treatment plan.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
Information about infusions with LIBTAYO

Below are questions you can ask your doctor to help you prepare for your treatments with LIBTAYO.

What is the most important information I should know about my first infusion?

Is there anything you need to know from me prior to my first infusion?

Is there any type of follow-up after each infusion?

Important Safety Information (continued)

Before you receive LIBTAYO, tell your healthcare provider about all your medical conditions, including if you (continued):

Females who are able to become pregnant:
– Your healthcare provider will give you a pregnancy test before you start treatment.
– You should use an effective method of birth control during your treatment and for at least 4 months after your last dose of LIBTAYO. Talk with your healthcare provider about birth control methods that you can use during this time.
– Tell your healthcare provider right away if you become pregnant or think you may be pregnant during treatment with LIBTAYO.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
What is the most important information I should know about LIBTAYO?

LIBTAYO is a medicine that works with your immune system. It can cause your immune system to attack normal organs and tissues in any area of your body and can affect the way they work. These problems can sometimes become severe or life-threatening and can lead to death. You can have more than one problem at the same time. These problems may happen anytime during treatment or even after your treatment has ended.

Call or see your healthcare provider right away if you develop any symptoms of the following problems or these symptoms get worse:

Lung problems (pneumonitis)
- New or worsening cough
- Shortness of breath
- Chest pain

Intestinal problems (colitis) that can lead to tears or holes in your intestine
- Diarrhea (loose stools) or more frequent bowel movements than usual
- Stools that are black, tarry, or sticky, or that have blood or mucus
- Severe stomach-area (abdomen) pain or tenderness

Liver problems (hepatitis)
- Yellowing of your skin or the whites of your eyes
- Severe nausea or vomiting
- Pain on the right side of your stomach area (abdomen)
- Drowsiness
- Dark urine (tea colored)
- Bleeding or bruising more easily than normal
- Feeling less hungry than usual
What is the most important information I should know about LIBTAYO? (continued)

**Hormone gland problems** (especially the adrenal glands, pituitary, thyroid, and pancreas)

- Headaches that will not go away or unusual headaches
- Rapid heartbeat
- Increased sweating
- Extreme tiredness
- Weight gain or weight loss
- Dizziness or fainting
- Feeling more hungry or thirsty than usual
- Hair loss
- Feeling cold
- Constipation
- Deeper voice
- Very low blood pressure
- Urinating more often than usual
- Nausea or vomiting
- Stomach-area (abdomen) pain
- Changes in mood or behavior, such as decreased sex drive, irritability, or forgetfulness

**Kidney problems**, including nephritis and kidney failure

- Decrease in your amount of urine
- Blood in your urine
- Swelling in your ankles
- Loss of appetite

**Skin problems**

- Rash
- Itching
- Skin blistering
- Painful sores or ulcers in the mouth, nose, throat, or genital area

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
What is the most important information I should know about LIBTAYO? (continued)

Problems in other organs

- Headache
- Tiredness or weakness
- Sleepiness
- Changes in heartbeat (such as beating fast, seeming to skip a beat, or a pounding sensation)
- Confusion, fever, muscle weakness, balance problems, nausea, vomiting, stiff neck, memory problems, or seizures (encephalitis)
- Swollen lymph nodes, rash or tender lumps on skin, cough, shortness of breath, vision changes, or eye pain (sarcoidosis)
- Seeing or hearing things that are not there (hallucinations)
- Severe or persistent muscle pain
- Severe muscle weakness
- Low red blood cells (anemia)
- Bruises on the skin or bleeding
- Changes in eyesight

Rejection of a transplanted organ

Tell your doctor if you have had an organ transplant. Your doctor should tell you what signs and symptoms you should report and monitor you, depending on the type of organ transplant that you have had.

Infusion (IV) reactions that can sometimes be severe and life-threatening

- Chills or shaking
- Itching or rash
- Flushing
- Shortness of breath or wheezing
- Dizziness
- Fever
- Feeling of passing out
- Back or neck pain
- Facial swelling

Getting medical treatment right away may help keep these problems from becoming more serious.

Your healthcare provider will check you for these problems during your treatment with LIBTAYO. Your healthcare provider may treat you with corticosteroid or hormone replacement medicines. Your healthcare provider may delay or completely stop treatment if you have severe side effects.
What are the most common side effects of LIBTAYO?

LIBTAYO can cause serious side effects, including those described on pages 20 to 22. The most common side effects of LIBTAYO include tiredness, rash, diarrhea, muscle or bone pain, and nausea. These are not all the possible side effects of LIBTAYO.

In the LIBTAYO clinical trials of 219 patients with advanced CSCC:

- **Tiredness**: 74 out of 219 patients (34%) experienced tiredness.
- **Muscle or bone pain**: 53 out of 219 patients (24%) experienced muscle or bone pain.
- **Rash**: 68 out of 219 patients (31%) experienced having a rash.
- **Nausea**: 46 out of 219 patients (21%) experienced nausea.
- **Diarrhea**: 55 out of 219 patients (25%) experienced diarrhea.

Please see additional Important Safety Information throughout and [click here for full Prescribing Information](#), including [Medication Guide](#).
What are the most common side effects of LIBTAYO? (continued)

Please review “What is the most important information I should know about LIBTAYO?” on pages 20 to 22 and in the accompanying Medication Guide. Getting medical treatment right away may help keep these problems from becoming more serious.

Important Safety Information (continued)

Before you receive LIBTAYO, tell your healthcare provider about all your medical conditions, including if you (continued):

• are breastfeeding or plan to breastfeed. It is not known if LIBTAYO passes into your breast milk. Do not breastfeed during treatment and for at least 4 months after the last dose of LIBTAYO.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

The most common side effects of LIBTAYO include tiredness, rash, diarrhea, muscle or bone pain, and nausea. These are not all the possible side effects of LIBTAYO. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088. You may also report side effects to Regeneron Pharmaceuticals and Sanofi at 1-877-542-8296.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
Questions for your doctor

Below are questions you can ask your doctor to better understand treatment with LIBTAYO, including possible side effects. Use this page to take notes during your conversation.

What are the side effects that can occur while taking LIBTAYO?

__________________________________________________________________________

Are there tips you can offer to help manage side effects from LIBTAYO?

__________________________________________________________________________

What treatment goals do you have for me with LIBTAYO?

__________________________________________________________________________

What should I expect from treatment with LIBTAYO?

__________________________________________________________________________

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
LIBTAYO Surround Patient Support Program

LIBTAYO Surround is here to help. Your doctor is your trusted source for information about your condition and treatment. LIBTAYO Surround may be able to provide you with resources and support to assist you.

LIBTAYO Surround Commercial Copay Program*
You may be eligible to pay as little as $0 per month with the LIBTAYO Surround Commercial Copay Program.

LIBTAYO Surround Patient Assistance Program†
You may be eligible to receive LIBTAYO at no cost.

Other resources
LIBTAYO Surround can help you look for other ways to afford your medicine.

Nurse support
Nurse Advocates are available whenever you need more information and to support you throughout your treatment journey.

For more information, call LIBTAYO Surround at 1.877.LIBTAYO (1.877.542.8296), select option 1, Monday–Friday, 8:00 AM–8:00 PM Eastern Time.

*This program is not valid for prescriptions covered by or submitted for reimbursement under Medicare, Medicaid, Veterans Affairs/Department of Defense, TRICARE, or similar federal or state programs. Not a debit card program. The program does not cover or provide support for supplies, procedures, or any physician-related service associated with LIBTAYO. General non–product-specific copays, coinsurance, or insurance deductibles are not covered. Additional program conditions may apply.

†Additional criteria for financial need apply.
LIBTAYO Patient Starter Kit

Starting a new treatment is not always easy. That is why we created the LIBTAYO Patient Starter Kit to help support you as you begin your treatment. The materials provided are not meant to replace the advice from your doctor. Always speak with your doctor about any questions you have about treatment with LIBTAYO.

LIBTAYO Patient Starter Kit includes the following items:

**LIBTAYO patient brochure:** In this brochure, you will find information about treatment with LIBTAYO and other helpful resources.

**LIBTAYO Surround® patient overview brochure:** If you are eligible, LIBTAYO Surround may help you with financial support for LIBTAYO.

**Messenger bag:** Whether you are going about your day or heading to an appointment, you can use this bag to carry all the items you need.

**Blue Lizard® sunscreen:** This sunscreen can help protect you from harmful UV rays.

**Travel blanket:** This versatile blanket can be rolled up into a pillow or even an arm rest.

**Various magazines:** Read the inspirational stories of other people managing this disease. Learn about their personal victories and struggles.

**LIBTAYO patient wallet card:** Click here to download your printable wallet card and carry it with you while you are on treatment with LIBTAYO. If you see a healthcare provider who is not involved in your cancer treatment, such as a primary care provider or a doctor in the emergency room, show the care team this card to alert them that you are taking LIBTAYO. This information is important for all healthcare providers involved in your care.

Order your FREE starter kit today!
Call LIBTAYO Surround at 1.877.LIBTAYO (1.877.542.8296), select option 1, Monday–Friday, 8:00 AM–8:00 PM Eastern Time.

Blue Lizard is a registered trademark of Crown Laboratories, Inc.

Please see additional Important Safety Information throughout and click here for full Prescribing Information, including Medication Guide.
Additional resources

Advocacy organizations give not only information, but also encouragement. There are a number of organizations that support patients with cancer and their caregivers. The organizations listed here deal with all types of cancers, including skin cancers.

The Skin Cancer Foundation
Established in 1979, the Foundation is the only global organization solely devoted to the prevention, early detection, and treatment of skin cancer. They strive to decrease the incidence of skin cancer through public and professional education and research. Visit the website to learn more about CSCC and advanced CSCC. skincancer.org

American Cancer Society
The American Cancer Society is a global grassroots force of 1.5 million volunteers dedicated to saving lives, celebrating lives, and leading the fight for a world without cancer. From breakthrough research to free lodging near treatment, a 24/7/365 live helpline, free rides to treatment, and convening powerful activists to create awareness and impact, the Society is the only organization attacking cancer from every angle. cancer.org

CancerCare
CancerCare is the leading national organization providing free, professional support services and information to help people manage the emotional, practical, and financial challenges of cancer. Our services include case management, counseling, support groups, educational workshops, publications, and more. cancercare.org

Cancer Support Community
The Cancer Support Community is the largest professionally led nonprofit network of cancer support worldwide. This global network is dedicated to helping all people impacted by cancer. In addition to producing educational resources, the Cancer Support Community conducts cutting-edge research on the psychological, financial, and emotional journey of cancer patients. cancersupportcommunity.org

Skin Cancer Education and Research Foundation (SCERF)
SCERF is dedicated to fighting the epidemic of nonmelanoma skin cancer through awareness, resources, and support. The Foundation is committed to assisting patients, their families, and their caregivers to obtain the best care and outcomes possible, as they navigate their journey with skin cancer. Visit the website to learn more about prevention, diagnosis, and treatment of squamous cell skin cancer and basal cell carcinoma. skincancerinfo.org

The organizations listed above are independent nonprofit organizations. Their inclusion here does not imply endorsement of LIBTAYO, Regeneron, or Sanofi Genzyme.
LIBTAYO helps your immune system fight advanced CSCC

- In 1 clinical trial of 137 patients,* almost half (63 out of 137 patients [46%]) saw tumors shrink or disappear completely
  - Responses to LIBTAYO lasted 6 months or longer in 50 out of 63 patients (79%) and 12 months or longer in 34 out of 63 patients (54%)
- In the same trial, in a separate group of 56 patients with CSCC that had spread who took LIBTAYO at the recommended dose,† 23 out of 56 patients (41%) saw an improvement in their advanced CSCC
  - Responses to LIBTAYO lasted 6 months or longer in 15 out of 23 patients (65%)
- In a different clinical trial of 26 patients,* 13 out of 26 patients (50%) saw tumors shrink (all partial responses)
  - Responses to LIBTAYO lasted 6 months or longer in 11 out of 13 patients (85%)
- The most common side effects of LIBTAYO include tiredness, rash, diarrhea, muscle or bone pain, and nausea. These are not all the possible side effects of LIBTAYO

In these trials, responses lasted between 1 month and more than 2 years (24.2+ months); plus sign (+) denotes ongoing at last assessment.

*Patients were dosed by body weight.
†LIBTAYO 350 mg over a 30-minute infusion every 3 weeks.

Select Important Safety Information

What is the most important information I should know about LIBTAYO?

LIBTAYO is a medicine that may treat a type of skin cancer by working with your immune system. LIBTAYO can cause your immune system to attack normal organs and tissues in any area of your body and can affect the way they work. These problems can sometimes become severe or life-threatening and can lead to death. You can have more than one problem at the same time. These problems may happen anytime during treatment or even after your treatment has ended.
